

## Slow release watering bags

When planting young saplings, it is extremely important that they root well.

Use the AquaBag to prevent your newly planted trees from drying out or from being over-watered.

The AquaBag is a kind of drip bag that slowly releases drops of water around the trunk of the tree over a period of 6 to 10 hours, which prevents the water from draining away, and gives the tree ample time to absorb the water.

The bag is easy to attach around the tree by means of a zip.

Fill the AquaBag with clean water once or twice a week for optimal growth (to prevent the holes of the AquaBag from becoming blocked).

The bag can also be placed around the tree post if there is a risk of fungi or a lack of oxygen at the stem/trunk. This allows the water to drip at the root ball, while leaving the trunk unrestricted.

### Material

- Capacity 75 liters
- Easy to install
- Reusable
- 1 or more AquaBags per tree
- Can be used with trees and shrubs
