- HDPE, black, 100% recyclable, 2 mm
- UV-stable
- Long lifespan
- Tear and break resistant
- Waterproof
- Available in rolls and panels

Additional solutions

Fauna Safe Panels

Because of the increasing traffic flow close to natural areas, animals are knocked over frequently. The installment of Fauna Safe Panels helps protecting these animals.

GreenMax offers you amphibian screens of the highest quality. These screens are inexpensive, UV-resistant, have a long lifespan, and are easy to install. Amphibian screens are often installed in combination with mesh to protect small game.

The green rolls feature a light grain structure. This has the significant advantage of preventing light reflection, making the screens aesthetically fit better into the landscape.

Additionally, the amphibian screens are also available on smooth panels that are 3 meters wide, offered in various thicknesses and heights.
