Aeration & Irrigation

Aeration & Irrigation

Many (young) trees, shrubs and hedges in urban environments suffer from drought or lack of oxygen to the roots. This is usually caused by a compacted soil structure and/or the fact that rainwater hardly penetrates the soil. The AirMax aeration system and the AquaMax irrigation system is a highly effective and easy to install system for the convenient irrigation of trees.

All AirMax and AquaMax hoses and tubes are as standard provided with a polyester filtering cloth that allows an even infiltration of water (when used as irrigation) and a minimum of 45% diffusion (when used as aeration).

AquaMax BIO

AirMax/AquaMax BIO is a compostable aeration/irrigation system produced from corn and the bio synthetic granulate Cradonyl®.

All components are biodegradable and will begin to decompose within 3 to 5 years. It is therefore a much more durable solution than the standard plastic systems. Undergrundaeration and irrigation desperately needs the tree for the first few years after planting, after which the system is superfluous and the plastics remain useless in the ground.

Advantages

- Natural resources
- 40% Reduction of CO2 gasses during the production process
- Sustainable and environmentally friendly
- In the right circumstances the system is completely compostable

AirMax Bio meets all the requirements of biodegradability (biodegradable) according to the standards EN13432, ASTM D6400, Vincotte OK Compost.
