

Material

- Capacity: 75 liters
- Easy to install
- Reusable
- 1 or more AquaBags per tree
- Can be used with trees and shrubs

Irrigation

AquaBag

When planting new trees, it is very important that they root well. Use the AquaBag to prevent your newly planted trees from drying out or from being over-watered.

The AquaBag is a water bag that slowly releases drops of water around the trunk of the tree over a period of 6 to 10 hours, which prevents the water from draining away, and gives the tree ample time to absorb the water. The bag is easy to attach around the tree using a zip.

Fill the AquaBag with clean water once or twice a week for optimal growth and to prevent the holes of the AquaBag from becoming blocked.

The bag can also be placed around the tree post if there is a risk of fungi or a lack of oxygen at the stem/trunk. This allows the water to drip at the root ball, while leaving the trunk unrestricted.
