Earth anchoring for slopes

Vulcan® Earth Anchors
keep geotextile mats
firmly in place, effectively
preventing soil erosion
on slopes.

Vulcan®

- Fast and easy installation
- The only supplier offering Earth Anchors not only in galvanized steel and aluminium bronze, but also in stainless steel
- Enhances biodiversity on slopes by combining Vulcan® Earth Anchors with geotextile mats
- Fast delivery from stock
- Fully produced in Europe from recycled steel
- Sustainable alternative to a grouted anchor
- Suitable for slopes up to 80°*

*Depending on soil type

Vulcan® Earth Anchors

Sustainable and stable slopes start with strong anchoring

Soil erosion

The risk of soil erosion is increasing due to more intense rainfall and prolonged droughts. Heavy rain washes away the soil, while drought makes the ground brittle and more susceptible to water and wind erosion. This not only affects the landscape but can also cause damage to infrastructure such as roads and tunnels. Don't wait for erosion to occur—take preventive measures in time to avoid these problems.

Vulcan® Earth Anchors

A strong and stable slope starts with the right anchoring system. Vulcan® Earth Anchors are used on slopes to secure geotextile mats firmly in place. This combination creates a stable foundation and prevents soil erosion. In addition, the system supports biodiversity by allowing vegetation to grow through the geotextile mats. Vulcan® Earth Anchors are available in a range of sizes and models to meet specific soil and project requirements.

On-site support

To ensure every project is completed successfully, we offer on-site support. This guarantees proper installation of our solutions and helps create a safe and reliable above-ground infrastructure.
