

Combine with a coconut water reservoir for optimal growing conditions!

### Material

- Made entirely from plant-based coconut fibre, without additives
- 100% biodegradable
- Strong braided construction
- Lightweight and easy to apply
- Length per roll: 10 m
- Thickness: 2 cm
- Lifespan: minimum 3 years

## Tree Ties

# Coconut Tree Tie

The coconut tree tie helps young trees remain stable after planting. It prevents damage to the root ball caused by wind load, thereby supporting healthy growth of newly planted trees.

### Biodegradable tree tie

The dense braided structure provides high tensile strength, while the material remains flexible and easy to handle. In addition, the tree tie is fully biodegradable, meaning it will naturally become part of the soil over time.

### Additional trunk protection

For extra protection of the tree bark, the coconut tree tie is often used in combination with a coconut protection sleeve. This is a small roll placed around the tree tie before it is secured around the trunk. It creates a soft protective layer between the tie and the bark. This prevents the tie from cutting into the bark under tension or movement and ensures the trunk remains well protected during the growing period.
