

Combine with a water reservoir or AquaBag to efficiently deliver both water and nutrients

Material

- Fully plant-based fertiliser consisting of natural sugars, trace elements and amino acids
- Ingredients: beet vinasse, protamylase, fulvic acids, yucca extract
- Dosage: 1 litre of AquaPower per 100 litres of water
- Application: twice a year in May and July, and during periods of heat or drought
- Shelf life: 2 years from production date

Natural fertiliser AquaPower

AquaPower is a fully plant-based liquid fertiliser suitable for all crops. The blend of natural sugars, trace elements and amino acids has been developed to stimulate rich soil life and promote healthy plant growth.

Absorbable at low temperatures

AquaPower contains various trace elements, natural sugars and amino acids. The amino acids can be absorbed even at low soil temperatures.

Application of AquaPower

The required amount of AquaPower is mixed with water in a tank. This mixture is then applied to trees or shrubs. For efficient absorption at the roots, AquaPower mixed with water is administered via a water reservoir or AquaBag. This ensures the tree receives both water and nutrients.

Photo: trees on the left treated once with AquaPower, trees on the right untreated.
